CP-series CP1E CPU Units CP1E-E SD CP1E-N SD CP1E-E D CP1E-N D CP1E-E D CP1E-N D

The CP1E Programmable Controller: Economical, Easy to use, and Efficient

- ■The E□□(S)-type Basic CPU Units provide cost performance and easy application with only basic functionality.
- ■The N□□(S□) and NA-types Application CPU Units support Programmable Terminal connection, position control, and inverter connection

Includes products no longer available to order. See Ordering Information for details.

Features

- New CP1E CPU Units now available.
 - Lineup including CPU Units with built-in three ports: USB, RS-232C, RS-485.
 - The depth of CPU Units with RS-232C connectors is reduced by 20 mm. (N30/40/60S(1))
- Easy connection with computers using commercially available USB cables.
- With E30/40/60(S), N30/40/60(S□) or NA20 CPU Units, Add I/O, Analog I/O or Temperature Inputs by Connecting Expansion Units or Expansion I/O Units.
- Input interrupts
- Complete High-speed Counter Functionality.
- Versatile pulse control for Transistor Output for N14/20/30/40/60(SD) or NA20 CPU Units.
- PWM Outputs for Transistor Output for N14/20/30/40/60(SD) or NA20 CPU Units.
- Mounting Serial Option Boards, Ethernet Option Board and Analog Option Board to N30/40/60 or NA20 CPU Units.
- Built-in analog I/O, two inputs and one output, for NA-type CPU Units.

Difference between E/N/NA - type and E/N - S(1)-type

■Basic Model E□□(S)-type CPU Units

Difference in Characteristics and Functions

Function	E⊟⊡-type (Normal)	E□□S-type (Renewal)
Apolog adjustora	2 adjusters	None
Analog adjusters	(Setting range: 0 to 255)	The analog adjuster PV in A642/A643 is fixed on 0000.

Product Lineup

		E🗆 CPU U	nit (Normal)			E⊟⊟S CPU U	nit (Renewal)		
	Relay	outputs		or outputs sourcing)	Relay	outputs	Transistor outputs (sinking/sourcing)		
Power supply	AC	DC	AC	DC	AC	DC	AC	DC	
10 I/O points	0	0	0	0					
14 I/O points	0				0				
20 I/O points	0				0				
30 I/O points	0				0				
40 I/O points	0				0				
60 I/O points					0				

■Application Model N/NA□□(S)-type CPU Units

Renewal-type

Difference in Characteristics and Functions

Fun	ction	N/NA□□-type (Normal)	N⊟⊡S(1)-type (Renewal)
Analog adju	sters	2 adjusters (Setting range: 0 to 255)	None The analog adjuster PV in A642/A643 is fixed on 0000.
Built-in RS-2	232C port	6 signals are supported: SD, RD, RS, CS, DR and ER.	4 signals are supported: SD, RD, RS and CS. DR (pin 7) and ER (pin 8) are not supported.
Option board	d	1 port (N30/40/60, NA20 CPU Unit only)	Cannot be mounted There is no slot for an option board.
Built-in RS-4	185 port	None	1 port (N30/40/60S1 CPU Unit only) With 2-wire connections, it can only communicate in half duplex. Terminating resistance ON/OFF can be set by DIP switch.
Terminal Arrangements (Transistor outputs only)	COM allocation	CIO 100.00 and CIO 100.01 correspond with different common terminals.	CIO 100.00 and CIO 100.01 correspond with the same common terminal.
	Power supply for transistor outputs	Not needed Do not connect an external power supply.	Needed It is necessary to connect a DC24V external power supply when using terminals 00 and 01 on terminal block CIO 100. Do not connect the external power supply to the terminals except 00 and 01 on terminal block CIO 100.

Optional Products

■Battery Set

Product name	Specifications	Model
Battery Set	 For N/NA□(S□)-type CP1E CPU Units Note: Mount a Battery to an N/NA□(S□)-type CPU Unit if the data in the following areas must be backed up for power interruptions. DM Area (D) (except backed up words in the DM Area), Holding Area (H), Counter Completion Flags (C), Counter Present Values (C), Auxiliary Area (A), and Clock Function (Use batteries within two years of manufacture.) 	CP1W-BAT01

Option Board (for CP1E N30/40/60 or NA20 CPU Units)

The Options cannot be used for CP1E N14/20, N30/40/60S(1), E10/14/20/30/40/60(S) CPU Units.

Product name	Specifications	Model
RS-232C Option Board		
	One RS-232C Option Board can be mounted to the Option Board slot.	CP1W-CIF01
RS-422A/485 Option Board		
		CP1W-CIF11
RS-422A/485 Isolated-type Option Board	One RS-422A/485 Option Board can be mounted to the Option Board slot.	
		CP1W-CIF12-V1
Ethernet Option Board	One Ethernet Option Board can be mounted to the Option Board slot.	
	CP1E CPU Units are supported by CP1W-CIF41 version 2.0 or higher. When using CP1W-CIF41, CX-Programmer version 9.12 or higher is required.	CP1W-CIF41
Analog Input Option Board		
	Can be mounted in CPU Unit Option Board slot. 2 analog inputs. 0-10V(Resolution:1/4000), 0-20mA (Resolution:1/2000).	CP1W-ADB21 *
Analog Output Option Board		
C 国 副	Can be mounted in CPU Unit Option Board slot. 2 analog outputs. 0-10V (Resolution:1/4000).	CP1W-DAB21V খ
Analog I/O Option Board	Can be mounted in CPU Unit Option Board slot.	
	2 analog inputs. 0-10V (Resolution:1/4000), 0-20mA(Resolution:1/2000). 2 analog outputs. 0-10V (Resolution:1/4000).	CP1W-MAB221 \$

Note: It is not possible to use a CP-series Ethernet Option Board version 1.0 (CP1W-CIF41), LCD Option Board (CP1W-DAM01), or Memory Card (CP1W-ME05M) with a CP1E CPU Unit.

* Support is provided with CP1E CPU Unit version 1.2 and later.

Expansion I/O Units and Expansion Units (for CP1E E30/40/60(S), N30/40/60(S□), or NA20 CPU Units) CP1E E10/14/20(S) or N14/20 CPU Units do not support Expansion I/O Units and Expansion Units.

■I/O Connecting Cable

Product name	Specifications	Model
I/O Connecting Canle	80 cm (for CP1W Expansion I/O Units and Expansion Units) Only one I/O Connecting Cable can be used in each PLC.	CP1W-CN811

Note: An I/O Connecting Cable (approx. 6 cm) for horizontal connection is provided with CP1W Expansion I/O Units and Expansion Units.

DIN Track Accessories

Name	Specifications	Model
	Length: 0.5 m; Height: 7.3 mm	PFP-50N
DIN Track	Length: 1 m; Height: 7.3 mm	PFP-100N
	Length: 1 m; Height: 16 mm	PFP-100N2
End Plate	A stopper to secure the Units on the DIN Track.	PFP-M

Programming Devices

Software

	Specifications			
Product name		Number of licenses	Media	Model
FA Integrated Tool Package CX-One Lite Ver.4.⊡	 CX-One Lite is a subset of the complete CX-One package that provides only the Support Software required for micro PLC applications. CX-One Lite runs on the following OS. OS: Windows 7 (32-bit/64-bit version) / Windows 8 (32-bit/64-bit version) / Windows 8.1 (32-bit/64-bit version) / Windows 10 (32-bit/64-bit version) CX-One Lite Ver. 4.□ includes Micro PLC Edition CX-Programmer Ver.9.□. 	1 license	DVD	CXONE-LT01D-V4
FA Integrated Tool Package CX-One Package Ver. 4.⊡	CX-One is a comprehensive software package that integrates Support Software for OMRON PLCs and components. CX-One runs on the following OS. OS: Windows 7 (32-bit/64-bit version) / Windows 8 (32-bit/64-bit version) / Windows 8.1 (32-bit/64-bit version) / Windows 10 (32-bit/64-bit version) / CX-One Ver. 4. includes CX-Programmer Ver. 9.	1 license *	DVD	CXONE-AL01D-V4

Note: 1. The E20/30/40(S), N20/N30/N40(S) CPU Units are supported by CX-Programmer version 8.2 or higher.

The E10, E14, N14, N60, and NA20 CPU Units are supported by CX-Programmer version 9.03 or higher. When Micro PLC Edition CX-Programmer is used, you need version 9.03 or higher.

The EGOS CPU Units are supported by CX-Programmer version 9.42 or higher. When Micro PLC Edition CX-Programmer is used, you need version 9.42 or higher.

2. The CX-One and CX-One Lite cannot be simultaneously installed on the same computer.

* Multi licenses (3, 10, 30, or 50 licenses) and DVD media without licenses are also available for the CX-One.

The following tables lists the Support Software that can be installed from CX-One

Applicable standards		Conforms to EC Directive				
Grounding method		Ground to 100 Ω or less.				

* 1 Total of 110 mm with mounting brackets.

*2 Excluding cables.

* 3 Use the external power supply to power input devices. Do not use it to drive output devices.
* 4 This is the rated value for the maximum system configuration. Use the following formula to calculate power consumption for CPU Units with DC power. Formula: DC power consumption = (5V current consumption × 5 V/70% (internal power efficiency) + 24V current consumption) × 1.1(current fluctuation factor)

The above calculation results show that a DC power supply with a greater capacity is required.

Some operations, such as online editing, and changes to present values in I/O memory enabled in this mode. RUN mode: Programs are executed. This is the normal operating mode.			

Internal Memory in the CPU Units

CPU Unit Memory Backup Structure

The internal memory in the CPU Unit consists of built-in RAM and built-in EEPROM. The built-in RAM is used as execution memory and the builtin EEPROM is used as backup memory.

Precautions for Correct Use

Create a system and write the ladder programs so that problems will not occur in the system if the data in these area may be unstable.

- Data in areas such as the DM area (D), Holding Area (H), the Counter Present Values (C) and the status of Counter Completion Flags (C), which is retained by the battery, may be unstable when the power supply is turned off (Except for the DM area that are retained by the built-in EEP-ROM using the Auxilliary Area bit.)
- The error log, and clock data (N/NA (S)-type CPU Unit only) in the Auxiliary Area will become unstable. Other words and bits in the Auxiliary Area will be cleared to their default values.

The built-in capacitor's backup time varies with the ambient temperature as shown in the following graph.

Ambient temperature

I/O Memory Areas

Data can be read and written to I/O memory from the ladder programs. I/O memory consists of an area for I/O with external devices, user areas, and system areas.

I/O Memory Areas

N	lame	No. of bits	Word addresses	Remarks
	Input Bits	1,600 bits (100 words)	CIO 0 to CIO 99	For NA-type, CIO90, CIO91 is occupied by analog input 0, 1.
CIO Area	Output Bits	1,600 bits (100 words)	CIO 100 to CIO 199	For NA-type, CIO190 is occupied by analog output 0.
	Serial PLC Link Words	1,440 bits (90 words)	CIO 200 to CIO 289	
Work Area (W)		1,600 bits (100 words)	W0 to W99	
Holding Area (H)		800 bits (50 words)	H0 to H49	Data in this area is retained during power interruptions if a Battery Set (sold separately) is mounted to an N/NA□□(S□)-type CPU Unit.
Data Memory Area (D)	E□□(S)-type CPU Unit	2K words	D0 to D2047	Data in specified words of the DM Area can be retained in the built-in EEPROM in the backup memory by using a bit in the Auxiliary Area. Applicable words: D0 to D1499 (One word can be specified at a time.)
	N/NA⊡(S⊡)-type CPU Unit	8K words	D0 to D8191	Data in specified words of the DM Area can be retained in the built-in EEPROM in the backup memory by using a bit in the Auxiliary Area. Applicable words: D0 to D6999 (One word can be specified at a time.)
Time	Present values	256	T0 to T255	
Timer Area (T)	Timer Completion Flags	er Completion Flags 256		
Counter Area (C)	Present values	256	C0 to C255	Data in this area is retained during power interruptions if a Battery Set (sold separately) is mounted to an N/NA□□(S□)-type CPU Unit.
	Counter Completion Flags	256	1	
	Read only	7168 bits (448 words)	A0 to A447	Data in this area is retained during power interruptions if a
Auxiliary Area (A)	Read-write	4,896 bits (306 words)	A448 to A753	Battery Set (sold separately) is mounted to an N/NA□□(S□)- type CPU Unit.

Backing Up and Restoring DM Area Data

The contents of the DM Area (D) will become unstable if the power supply is interrupted for longer than the backup time of the built-in capacitor (50 hours for an $E^{(s)}$ -type CPU Unit, 40 hours for an N/NA $^{(s)}$ -type CPU Unit without a Battery).

The contents of the specified words in the DM Area data can be backed up from RAM to the built-in EEPROM backup memory during operation by turning ON a bit in the Auxiliary Area. The number of DM Area words to back up is specified in the Number of CH of DM for backup Box in the PLC Setup. If the Restore D0- from backup memory Check Box is selected in the PLC Setup, the backup data will automatically be restored to RAM when the power is turned back ON so that data is not lost even if power is interrupted.

Conditions for Executing Backup

Specified words starting from D0 in the RAM can be saved to the built-in EEPROM backup memory by turning ON A751.15. (These words are called the DM backup words and the data is called the DM backup data.) A751.15 (DM Backup Save Start Bit) can be used in any operating mode (RUN, MONITOR, or PROGRAM mode).

Words That Can Be Backed Up

- E□□(S)-type CP1E CPU Units: D0 to D1499
- N/NA□□(S□)-type CP1E CPU Units: D0 to D6999

Number of Words To Back Up

The number of words to back up starting from D0 is set in the Number of CH of DM for backup Box in the Startup Data Read Area in the PLC Setup.

Restoring DM Backup Data to RAM When Power Is Turned ON

The DM backup data can be restored to RAM when power is turned ON by selecting the *Restore D0- from backup memory* Check Box in the *Startup Data Read* Area in the PLC Setup.

The DM backup data will be read from the backup memory even if the *Clear retained memory area (HR/DM/CNT)* Check Box is selected in the PLC Setup.

i.	Clear retained memory area(HR/DM/CNT)
	The retained memory value becomes irregular wher running without battery.

### **Allocating Built-in Inputs to Functions**

Input terminals are allocated functions by setting parameters in the PLC Setup. Set the PLC Setup so that each terminal is used for only one function.

### Allocating Built-in Output Terminals to Functions

Output terminals are allocated functions by setting parameters in the PLC Setup. Set the PLC Setup so that each terminal is used for only one function.

|   |     |     |        |   | Output t                | orminal            | Other than those       | When a pulse output instruction          | Setting in PLC Setup                                  | When the PWM                        |

- \*1 The bits that can be used depend on the model of CPU Unit.
- \* 2 The response time is the delay caused by hardware. The delay set in the PLC Setup (0 to 32 ms, default: 8 ms) for a normal input must be added to this value.

Pulse plus direction input mode, Increment mode Up/down input mode

#### Differential phase mode

#### Estimating the Service Life of Relays

Under normal conditions, the service life of output contacts is as shown above. The service life of relays is as shown in the following diagram as a guideline

#### Relationship between Continuous Simultaneous ON Rate and Ambient Temperature

There are restrictions on the power supply voltage and output load current imposed by the ambient temperature. Make sure that the power supply voltage and output load current are within the following ranges.

Note: The above restrictions apply to the relay output load current from the CPU Unit even if Expansion I/O Units are not connected.

### Output Specifications for Transistor Outputs (Sinking or Sourcing) Normal Outputs

Note: Do not connect a load to an output terminal or apply a voltage in excess of the maximum switching capacity. \* 1 Also do not exceed 0.9 A for the total for CIO 100.00 to CIO 100.03. (CIO 100.00 to CIO 100.03 is different common.) \* 2 The bits that can be used depend on the model of CPU Unit.

#### Pulse Outputs (CIO 100.00 and CIO 100.01)

Note: 1. The load for the above values is assumed to be the resistance load, and does not take into account the impedance for the connecting cable to the load.

2. Due to distortions in pulse waveforms resulting from connecting cable impedance, the pulse widths in actual operation may be smaller than the values shown above.

3. The OFF and ON refer to the output transistor. The output transistor is ON at level "L".

OMRON

29

# CP1E-EO(S)DO-O CP1E-NOO(SO)DO-O/NA20DO-O

### PWM Output (CIO 100.01)

| Item                       | Specification                                                                  |
|----------------------------|--------------------------------------------------------------------------------|
| Maximum switching capacity | 30 mA/4.5 to 26.4 VDC                                                          |
| Maximum output frequency   | 32 kHz                                                                         |
| PWM output accuracy        | For ON duty +1%, .0%:10 kHz output<br>For ON duty +5%, .0%: 0 to 32 kHz output |
| Output waveform            | OFF<br>ON T ON duty= $\frac{toN}{T} \times 100\%$                              |

Note: The OFF and ON refer to the output transistor. The output transistor is ON at level "L".

# Specifications of Expansion I/O Units and Expansion Units

### Expandable CPU Units

- Expansion I/O Units and Expansion Units cannot be connected to E10/14/20(S) or N14/20 CPU Units.
- A total of up to three Expansion I/O Units and Expansion Units can be connected to an E30/40/60(S), N30/40/60(S), NA20 CPU Unit.

### ●CP1E E10/14/20(S) or N14/20CPU Unit

CP-series Expansion Units and Expansion I/O Units cannot be connected.

### ●CP1E E30/40(S), N30/40/60(S□) or NA20 CPU Unit

and Expansion Units can be connected.

A total of up to three CP-series Expansion I/O Units

### **Connection Methods**

Connection cables for the Expansion I/O Units and Expansion Units are used to connect the Units. The length can be extended by using a CP1W-CN811 I/O Connection Cable (length: 800 m).

### Maximum Number of I/O Points for an Expanded System

### **Restrictions on External Power Supply Capacity**

The following restrictions apply when using the CPU Unit's external power supply.

### ●AC-power-supply E30/40(S), N30/40/60(S□) or NA20 CPU Unit

The power supply capacity is restricted for AC-power-supplyE30/40/60(S), N30/40/60(S $\square$ ), NA20 CPU Units. It may not be possible to use the full 300 mA of the external power supply, though a CPU Unit can connect any CP-series Expansion I/O Unit or Expansion Unit. The entire 300 mA from the external power supply can be used if Expansion Units and Expansion I/O Units are not connected. Refer to the CP1E CPU Unit Hardware Manual (Cat. No. W479) for details.

### ●AC-power-supply or DC-power-supply E10/14/20(S), N14/20(S) CPU Unit

There is no external power supply on AC-power-supply or DC-power-supply E10/14/20, N14/20 CPU Units.

### Specifications of Expansion I/O Units ●Input Specifications (CP1W-40EDR/40EDT/40EDT1/20EDR1/20EDT/20EDT1/8ED)

| Item                  | Specification    |
|-----------------------|------------------|
| Input voltage         | 24 VDC +10%/-15% |
| Input impedance       | 4.7 kΩ           |
| Input current         | 5 mA typical     |
| ON voltage            | 14.4 VDC min.    |
| OFF voltage           | 5.0 VDC max.     |
| ON delay              | 1 ms max. *      |
| OFF delay             | 1 ms max. *      |
| Circuit configuration | Input LED        |

Note: Do not apply voltage in excess of the rated voltage to the input terminal.

\* The response time is the hardware delay value. The delay set in the PLC Setup (0 to 32 ms, default: 8 ms) must be added to this value. For the CP1W-40EDR/EDT/EDT1, a fixed value of 16 ms must be added.

### Output Specifications Relay Outputs (CP1W-40EDR/32ER/20EDR1/16ER/8ER)

Note: 1. Estimating the Service Life of Relays

The service life of output contacts is as shown in the following diagram.

 Restrictions of CP1W-16ER/32ER Limit the output load current to satisfy the following derating curve.

 CP1W-32ER's maximum number of simultaneously ON output points is 24 (75%). Relation between Number of ON Outputs and Ambient Temperature (CP1W-32ER)

4. According to the ambient temperature, there are restrictions on power supply voltage and output load current for the CPU Units connected with the Expansion I/O Units (CP1W-8ER/16ER/20EDR1/32ER/40EDR). Use the PLC in the range of the power supply voltage and output load current as show below.

The ambient temperature is restricted for the power-supply CPU Units (CP1E-N/NA ...). Derating curve of the output load current for Expansion I/O Units (CP1W-8ER/16ER/20EDR1/32ER/40EDR).

### Transistor Outputs (Sinking or Sourcing)

|                                                         |                                             |                                             | Specification                               |                                             |                                             |  |

\*2 The fuse cannot be replaced by the user. Replace the Unit if the fuse breaks due to an short-circuit or overcurrent.
\*3 Do not connect a load to an output terminal or apply a voltage in excess of the maximum switching capacity.

**\* 1** Accuracy for a K-type sensor at -100°C or less is  $\pm$ 4°C  $\pm$ 1 digit max.

\* 2 Accuracy for a K-type sensor at -100°C or less is  $\pm 10^{\circ}$ C  $\pm 1$  digit max.

#### **DIP Switch Settings**

The DIP switch is used to set the input type (temperature or analog input), the input thermocouple type (K or J) and the temperature unit (°C or °F). **Note:** Set the temperature range according to the type of temperature sensor connected to the Unit. Temperature data will not be converted correctly if the temperature range does not match the sensor.

| Number of inputs           |           | 12 (2 input words and 1 output word allocated)                                          |  |
| A                          | 25°C      | (The larger of ±0.5% of converted value or ±2°C) ±1 digit max. <b>*</b> 1               |  |
| Accuracy                   | 0 to 55°C | (The larger of $\pm 1\%$ of converted value or $\pm 4^{\circ}$ C) $\pm 1$ digit max. *2 |  |
| Conversion time            |           | 500 ms for 12 input points                                                              |  |
| Converted temperature data |           | 16-bit binary data (4-digit hexadecimal)<br>2-decimal-place mode is not supported       |  |
| Isolation                  |           | Photocouplers between any two input signals                                             |  |
| Current consumption        |           | 5 VDC: 80 mA max., 24 VDC: 50 mA max.                                                   |  |

**\* 1** Accuracy for a K-type sensor at -100°C or less is  $\pm 4^{\circ}C \pm 1$  digit max. **\* 2** Accuracy for a K-type sensor at -100°C or less is  $\pm 10^{\circ}C \pm 1$  digit max.

#### **DIP Switch Settings**

The DIP switch is used to set the temperature unit and to set the temperature input range.

Note: Set the temperature range according to the type of temperature sensor connected to the Unit. Temperature data will not be converted correctly if the temperature range does not match the sensor.

| SW     |   |                  | Setting |    |

## **Analog Option Board**

An analog option board can be added to the CP1E-N/NA□□.

- Note: 1. Can be used for the CP1E-N/NA version 1.2 or later.
  - **2.** Analog boards can not be used for  $E \square$ -type and  $N \square S(1)$ -type.

Analog Input Option Board CP1W-DAB21V Analog Output Option Board CP1W-MAB221 Analog Input/Output Option Board

## Serial Communications Port for N/NA (SC)-type CPU Units

The Serial Communication Port can be used for a CP1E N/NA (S)-type CPU Unit.

#### N30/40/60S1 CPU Units

Built-in RS-232C, RS-485 ports.

### N30/40/60S CPU Units

Built-in RS-232C port.

### N30/40/60 or NA20 CPU Units

One built-in RS-232C port and one Option Board can be used.

## **Connecting to Support Software**

### **Connecting Methods**

Using commercially available USB cable, connect the CX-Programmer to the peripheral USB port on the CPU Unit. Host link connection can be made with RS-232C port to connect the Programming Device (CX-Programmer).

### **Connecting Cable**

Use the following cable to connect the CP1E CPU Unit to the computer running the Support Software.

#### USB port

| Port at Unit                                                | Port at computer | Network type<br>(communications mode) | Model numbers                                                | Length        |
|-------------------------------------------------------------|------------------|---------------------------------------|--------------------------------------------------------------|---------------|
| Peripheral USB port<br>(Conforming to USB 2.0, B connector) | USB port         | USB 2.0 (or 1.1)                      | Commercially available USB cable (A connector - B connector) | Less than 5 m |

#### RS-232C Port for N/NA (S)-type CPU Units

| Port at Unit                                                          | Port at computer | Communications mode   | Semmunications mode | Connecting Cable |                                |
|-----------------------------------------------------------------------|------------------|-----------------------|---------------------|------------------|--------------------------------|
| Fort at Offic                                                         | Port at computer | Communications mode   | Model               | Length           | Remarks                        |
| RS-232C Port or<br>CP1W-CIF01<br>(Add this to the option board slot.) |                  | Host Link<br>(SYSWAY) | XW2Z-200S-CV        | 2m               | With anti-static<br>connectors |
|                                                                       | RS-232C port *   |                       | XW2Z-500S-CV        | 5m               | With anti-static connectors    |
|                                                                       |                  |                       | XW2Z-200S-V         | 2m               |                                |
|                                                                       |                  |                       | XW2Z-500S-V         | 5m               |                                |

**Note:** Connectable with CX-Programmer Ver.9.1 or higher only. **\*** Use the USB-Serial Conversion Cable CS1W-CIF31 together to connect a PLC to a personal computer's USB port.

## **Programming Instructions**

### **Sequence Input Instructions**

| Instruction   | Mnemonic |
|---------------|----------|
| LOAD          | LD       |
| LOAD NOT      | LD NOT   |
| AND           | AND      |
| AND NOT       | AND NOT  |
| OR            | OR       |
| OR NOT        | OR NOT   |
| AND LOAD      | AND LD   |
| OR LOAD       | OR LD    |
| NOT           | NOT      |
| CONDITION ON  | UP       |
| CONDITION OFF | DOWN     |

### **Sequence Output Instructions**

| Instruction        | Mnemonic |
|--------------------|----------|
| OUTPUT             | OUT      |
| OUTPUT NOT         | OUT NOT  |
| KEEP               | KEEP     |
| DIFFERENTIATE UP   | DIFU     |
| DIFFERENTIATE DOWN | DIFD     |
| SET                | SET      |
| RESET              | RSET     |
| MULTIPLE BIT SET   | SETA     |
| MULTIPLE BIT RESET | RSTA     |
| SINGLE BIT SET     | SETB     |
| SINGLE BIT RESET   | RSTB     |

### **Sequence Output Instructions**

| Instruction                                | Mnemonic |
|--------------------------------------------|----------|
| END                                        | END      |
| NO OPERATION                               | NOP      |
| INTERLOCK                                  | IL       |
| INTERLOCK CLEAR                            | ILC      |
| MULTI-INTERLOCK<br>DIFFERENTIATION HOLD    | MILH     |
| MULTI-INTERLOCK<br>DIFFERENTIATION RELEASE | MILR     |
| MULTI-INTERLOCK CLEAR                      | MILC     |
| JUMP                                       | JMP      |
| JUMP END                                   | JME      |
| CONDITIONAL JUMP                           | CJP      |
| FOR LOOP                                   | FOR      |
| BREAK LOOP                                 | BREAK    |
| NEXT LOOP                                  | NEXT     |

### **Timer and Counter Instructions**

| Instruction         | Mnemonic |
|---------------------|----------|
| TIMER               | ТІМ      |
| TIMER               | TIMX     |
| COUNTER             | CNT      |
| COUNTER             | CNTX     |
| HIGH-SPEED TIMER    | ТІМН     |
| HIGH-SPEED HIMER    | ТІМНХ    |
| ONE-MS TIMER        | ТМНН     |
| ONE-MS TIMER        | ТМННХ    |
| ACCUMULATIVE TIMER  | TTIM     |
| ACCOMOLATIVE TIMER  | TTIMX    |
| LONG TIMER          | TIML     |
| LONG TIMER          | TIMLX    |
| REVERSIBLE COUNTER  | CNTR     |
| REVERSIBLE COUNTER  | CNTRX    |
| RESET TIMER/COUNTER | CNR      |
| RESET TIMER/COUNTER | CNRX     |

### **Comparison Instructions**

| Instruction                     | Mnemonic          |
|---------------------------------|-------------------|
|                                 | LD,AND,OR+=       |

| Floating Symbol Comparison | LD, AND, OR+<=F              |
|                            | LD, AND, OR+>F               |
|                            | LD, AND, OR+>=F              |
| FLOATING- POINT TO ASCII   | FSTR                         |
| ASCII TO FLOATING-POINT    | FVAL                         |

### **Table Data Processing Instructions**

| Instruction    | Mnemonic |
|----------------|----------|
| SWAP BYTES     | SWAP     |
| FRAME CHECKSUM | FCS      |

### **Data Control Instructions**

| Instruction                 | Mnemonic |
|-----------------------------|----------|
| PID CONTROL WITH AUTOTUNING | PIDAT    |
| TIME-PROPORTIONAL OUTPUT    | ТРО      |
| SCALING                     | SCL      |
| SCALING 2                   | SCL2     |
| SCALING 3                   | SCL3     |
| AVERAGE                     | AVG      |

#### **Subroutine Instructions**

| Instruction       | Mnemonic |
|-------------------|----------|
| SUBROUTINE CALL   | SBS      |
| SUBROUTINE ENTRY  | SBN      |
| SUBROUTINE RETURN | RET      |

### **Interrupt Control Instructions**

| Instruction        | Mnemonic |
|--------------------|----------|
| SET INTERRUPT MASK | MSKS     |
| CLEAR INTERRUPT    | CLI      |
| DISABLE INTERRUPTS | DI       |
| ENABLE INTERRUPTS  | EI       |

# High-speed Counter and Pulse Output Instructions

| Instruction                        | Mnemonic |
|------------------------------------|----------|
| MODE CONTROL                       | INI      |
| HIGH-SPEED COUNTER PV READ         | PRV      |
| COMPARISON TABLE LOAD              | CTBL     |
| SPEED OUTPUT                       | SPED     |
| SET PULSES                         | PULS     |
| PULSE OUTPUT                       | PLS2     |
| ACCELERATION CONTROL               | ACC      |
| ORIGIN SEARCH                      | ORG      |
| PULSE WITH VARIABLE DUTY<br>FACTOR | PWM      |

### **Step Instructions**

| Instruction | Mnemonic |  |
|-------------|----------|--|
| STEP DEFINE | STEP     |  |
| STEP START  | SNXT     |  |

#### I/O Unit Instructions

| Instruction              | Mnemonic |  |
|--------------------------|----------|--|
| I/O REFRESH              | IORF     |  |
| 7-SEGMENT DECODER        | SDEC     |  |
| DIGITAL SWITCH INPUT     | DSW      |  |
| MATRIX INPUT             | MTR      |  |
| 7-SEGMENT DISPLAY OUTPUT | 7SEG     |  |

#### **Serial Communications Instructions**

| Instruction | Mnemonic |  |
|-------------|----------|--|
| TRANSMIT    | TXD      |  |
| RECEIVE     | RXD      |  |

#### **Clock Instructions**

| Instruction       | Mnemonic |
|-------------------|----------|
| CALENDAR ADD      | CADD     |
| CALENDAR SUBTRACT | CSUB     |
| CLOCK ADJUSTMENT  | DATE     |

### **Failure Diagnosis Instructions**

| Instruction          | Mnemonic |  |
|----------------------|----------|--|
| FAILURE ALARM        | FAL      |  |
| SEVERE FAILURE ALARM | FALS     |  |

### **Other Instructions**

| Instruction               | Mnemonic |  |
|---------------------------|----------|--|
| SET CARRY                 | STC      |  |
| CLEAR CARRY               | CLC      |  |
| EXTEND MAXIMUM CYCLE TIME | WDT      |  |

## **Terms and Conditions Agreement**

#### Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

#### Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

#### Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

#### Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

#### Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

#### Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

#### Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

#### Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

Note: Do not use this document to operate the Unit.
